

centRO

Improving water.
Enhancing life.

centRO is the newest central RO unit from DWA. centRO is the result of extensive R&D research, combining our best technologies and bringing together 40 years of experience within dialysis. As the first RO being fully developed and marketed under regulation (EU) 2017/745 (MDR), centRO makes a difference on three fronts:

- + **environmentally friendly**
- + **the highest hygiene standards**
- + **the lowest lifecycle cost on the market**

Our mission is to relieve dialysis centers from operational burdens by designing solutions like centRO that improve patient care. Along with our partners we take immense pride in being a pioneer and authority on dialysis water treatment. Together, we create sustainable solutions that improve the live of patients and relieve dialysis centers worldwide in every aspect.

centRO

Your advantages at a glance.

centRO is the ideal solution for medium to large sized dialysis centers. This smart class IIb medical device (EUMDR) is available in single stage and two-stage purification. Specialising exclusively in water treatment for dialysis, DWA sets an international standard thanks to extensive R&D, continuous development and technical know-how. centRO is the bundling of all this in the form of a state-of-the art solution for your dialysis centre. centRO is therefore proudly considered DWA's new flagship.

DWA

The four decades of experience in a mixed team of very professional experts and young innovators, DWA is focussing as the only company in the world purely on water treatment for dialysis. Our knowledge has made DWA a pioneer in the field of environmentally friendly and cost-effective solutions. We are committed to design products that save water and energy. Thanks to our wide product range, every demand has a solution. With a maximum reliability, excellent safety and extensive support, we engage to set the standard in water treatment for dialysis.
