

# ECO

## A TOTALLY ENCLOSED LOWER BEARING GREASED FOR LIFE

## Environmentally friendly

Spaans Babcock, the original manufacturer of screw-pumps with installations world wide, is continuously improving the quality of their screw pumps.

The latest development is the ECO-line, a range of totally enclosed lower bearings, greased for life.

The development of the ECO-line was based upon the growing environmental concern associated with the discharge of used grease into our waterways. Research & Development by Spaans Babcock engineers has resulted in a very successful trial period for the ECO design lower bearings.

---

# Advantages

Advantages of the totally enclosed ECO lower bearing:

No discharge of used grease in the water	Environmentally friendly
Greased for life	Save on use of grease
Minimum wear	Save on spare parts
No grease pump necessary	Save on capital costs
No drive unit for grease pump	Save on energy
Retrofit existing waste grease bearing	Same dimensions of bearing housing and shaft

## Savings

The continuously running grease lubrication pump typically uses:

appr. 0,3 kg (0,6 - 1,4 lbs) grease per day  
appr. 4,3 kW per day  
+ costs for maintenance
